Index of the newbieDoc documentation

Romain Lerallut

rom1@users.sourceforge.net

The goal of the **NewbieDoc Project** is to write documentation: *Developing Documentation FOR Newbies BY Newbies.* For more info, see the project's homepage (http://newbiedoc.sourceforge.net)

This is the index file for all the documentation of the newbiedoc project that can be found in the sourceforge cvs repository.

Developers should add entries in this index when uploading new files

Note to Netscape 4 users: When rendered as html, these documents use "stylesheets" to make them look nicer. However, Netscape 4 is rather old and does not support stylesheets as well as it should. If our doc looks too weird, disable stylesheet support (Edit=Preferences=Advanced) to see the default formatting.

1. General Documentation

- What is sourceforge ?? (sourceforge-guide/index.html)
- The NewbieDoc Docbook guide (docbook-guide.en/index.html)
- The NewbieDoc Docbook guide (docbook-intro.en/index.html)
- The NewbieDoc Debian Glossary: (main-glossary-en/index.html)
- The Debian help system (help-system.en/index.html)

2. Finding stuff

- How can I find text in multiple files ? grep (grep/index.html)
- How can I extract info from ls,ps, etc ? grep (grep/index.html)
- Where I can I get hints and tips on finding more information? Debian help system (help-system.en/index.html)

3. Administration

- What are runlevels ? runlevels-intro (runlevels-intro/index.html)
- How can I start services automatically ? runlevels-intro (runlevels-intro/index.html)
- How can I install new software ? apt-get intro (apt-get-intro/index.html)
- Compiling custom kernels (kernel-pkg.en/index-kernel-pkg.html)
- Managing Processes (process/index.html) on a Linux system.

4. Networking

- Configuring exim (exim/index.html), the Mail Transport Agent
- Getting mail from a remote server (ISP,...) with fetchmail (fetchmail/index.html)

5. Text editing

- Joe: (joe/index.html) a good text editor for everyone
- Pico: (http://groups.yahoo.com/group/newbieDoc/files/editing%20TEXT/pico) the world's simplest text editor(*remote*)
- VI: (vi/index.html) a powerful console text editor
- Vim: (vim/index.html) an extended clone of the VI text editor

6. System

- Setting up new hardware (hardware/index.html)

7. Browsing the Newbiedoc Documentation

When the newbiedoc package is installed, you can just type

```
newbiedoc
```

at the prompt. This will start your favorite browser and display this index page. A 'Newbiedoc' entry has also been added to the Debian/Help menu.

To change to another browser, edit your `~/.bashrc` file and add:

```
export BROWSER=konqueror
```

Of course, if you prefer netscape, just type netscape instead of konqueror.

If you don't know how to edit this file, type

```
echo 'export BROWSER=konqueror' >> ~/.bashrc
```

at the prompt. It will simply append the line to the `~/.bashrc` file.

After this, log out and log in again so that the modifications are taken into account.
