acquisition_settings League waiver settings

Description

The type, days, and details of a league waiver process.

Usage

```
acquisition_settings(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of waiver settings by season.

See Also

```
Other league settings functions: draft_settings(), finance_settings(), league_info(), league_name(),
league_size(), roster_settings(), schedule_settings(), scoring_settings(), trade_settings()
```

Examples

acquisition_settings(leagueId = "42654852")

all_players All fantasy players (deprecated)

Description

```
See list_players().
```

Usage

all_players(...)

Arguments

. . .

Arguments passed to the new list_players() function.

See Also

```
Other player functions: list_players(), player_info(), player_news(), player_outlook(),
recent_activity(), transaction_counter()
```

Examples

Not run:
all_players()

End(Not run)

best_roster

Sort the optimal fantasy roster

Description

Uses the roster settings for each league to find the best possible combinations of players to score the most fantasy points.

Usage

```
best_roster(
  leagueId = ffl_id(),
  useScore = c("actualScore", "projectedScore"),
  scoringPeriodId = NULL,
  ...
```

Arguments

)

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
useScore	One of "projectedScore" or "actualScore" (default).
scoringPeriodI	d
	Integer week of NFL season. By default, NULL will use the current week (see ffl_week()). Scoring periods are always one week in length, whereas matchups might be longer.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Details

If scoringPeriodId is the current week (the default), then actual scoring might be incomplete (see projectedScore argument).

combine_history

Value

A dataframe (or list) with optimal rosters.

See Also

```
Other roster functions: roster_score(), start_roster(), team_roster()
```

Examples

```
best_roster(leagueId = "42654852", scoringPeriodId = 1)
```

combine_history (

Combine league history with current season

Description

Runs a function fun twice, once with the leagueHistory set to TRUE and once set to FALSE. Combined the output of both runs into a single data frame.

Usage

combine_history(fun, ...)

Arguments

fun	A function with the leagueHistory argument.
	Additional arguments passed to the function used in fun.

Value

A data frame of combined outputs.

```
combine_history(tidy_scores, leagueId = "252353")
```

draft_recap

Description

Return the sequential result of a fantasy draft pick, whether snake or salary cap format.

Usage

```
draft_recap(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame(s) of draft picks.

See Also

Other league functions: league_members(), league_messages(), league_standings(), league_status(), league_teams(), tidy_schedule(), transaction_counter()

Examples

```
draft_recap(leagueId = "42654852")
```

draft_settings League draft settings

Description

The type, date, and pick order of a league draft.

Usage

```
draft_settings(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

espn_games

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of league draft settings by season.

See Also

```
Other league settings functions: acquisition_settings(), finance_settings(), league_info(),
league_name(), league_size(), roster_settings(), schedule_settings(), scoring_settings(),
trade_settings()
```

Examples

draft_settings(leagueId = "42654852")

espn_games List all fantasy games

Description

List all fantasy games

Usage

espn_games()

Value

A tibble of fantasy games.

See Also

Other Game information: ffl_info(), ffl_seasons()

Examples

espn_games()

ffl_id

Description

Retrieve league ID from global options, as an input, or from a URL.

Usage

```
ffl_id(leagueId = getOption("fflr.leagueId"), overwrite = FALSE)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
overwrite	logical; If an fflr.leagueId option exists, should it be temporarily changed for your current session.

Details

Since many users request data from the same ESPN league when using this package, you can use this function to set, call, or extract the unique ESPN league ID. By default, this function uses getOption("fflr.leagueId") to look for a default league ID defined in your options(). If no such option exists, and one is provided to the leagueId argument, the option will be temporarily defined for your current session. If a URL starting with http is provided, the numeric league ID will be extracted, defined as the temporary option, and returned as a character string.

Value

A numeric leagueId as a character vector with length one.

```
options(fflr.leagueId = "42654852")
ffl_id()
ffl_id(
    leagueId = "https://fantasy.espn.com/football/team?leagueId=42654852",
    overwrite = TRUE
)
```

ffl_info

Description

Information on the current fantasy football season, with functions to quickly access and modify certain information (like the current seasonId or scoringPeriodId).

Usage

ffl_info()

ffl_year(offset = 0)

ffl_week(offset = 0)

Arguments

offset Add negative or positive values.

Value

A list of season information.

See Also

Other Game information: espn_games(), ffl_seasons()

Examples

```
str(ffl_info())
Sys.time()
ffl_year()
ffl_week(-1)
```

ffl_seasons

List past fantasy football seasons

Description

List past fantasy football seasons

Usage

ffl_seasons()

Value

A tibble of fantasy football seasons.

See Also

Other Game information: espn_games(), ffl_info()

Examples

ffl_seasons()

finance_settings League finance settings

Description

The off-site fees assigned to various roster movies and transactions.

Usage

```
finance_settings(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of finance settings by season.

See Also

```
Other league settings functions: acquisition_settings(), draft_settings(), league_info(),
league_name(), league_size(), roster_settings(), schedule_settings(), scoring_settings(),
trade_settings()
```

Examples

finance_settings(leagueId = "42654852")

league_info

League information

Description

Basic information on a ESPN fantasy football league, like the name, size, and season length.

Usage

```
league_info(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of league information by season.

See Also

```
Other league settings functions: acquisition_settings(), draft_settings(), finance_settings(),
league_name(), league_size(), roster_settings(), schedule_settings(), scoring_settings(),
trade_settings()
```

Examples

league_info(leagueId = "42654852")

league_members Fantasy league teams

Description

The teams in a league and their owners.

Usage

```
league_members(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A dataframe (or list) with league members.

See Also

```
Other league functions: draft_recap(), league_messages(), league_standings(), league_status(),
league_teams(), tidy_schedule(), transaction_counter()
```

Examples

league_members(leagueId = "42654852")

league_messages Fantasy league teams

Description

The emails, chats, notes, and messages sent by league members.

Usage

```
league_messages(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A tibble of messages.

league_name

See Also

```
Other league functions: draft_recap(), league_members(), league_standings(), league_status(),
league_teams(), tidy_schedule(), transaction_counter()
```

Examples

```
league_messages(leagueId = "42654852")
```

league_name League name

Description

League name

Usage

league_name(leagueId = ffl_id(), leagueHistory = FALSE, ...)

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A character vector.

See Also

```
Other league settings functions: acquisition_settings(), draft_settings(), finance_settings(),
league_info(), league_size(), roster_settings(), schedule_settings(), scoring_settings(),
trade_settings()
```

Examples

league_name(leagueId = "42654852")

Description

The ESPN algorithm simulates the entire season according to the projection and matchup schedule to calculate the probability of a team winning their division and making the playoffs.

Usage

```
league_simulation(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of simulated team standings.

Examples

league_simulation(leagueId = "42654852")

league_size League size

Description

League size

Usage

```
league_size(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

league_standings

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of league size by season.

See Also

```
Other league settings functions: acquisition_settings(), draft_settings(), finance_settings(),
league_info(), league_name(), roster_settings(), schedule_settings(), scoring_settings(),
trade_settings()
```

Examples

league_size(leagueId = "42654852")

league_standings League standings

Description

Return the current and projected standings, win streak, total wins, losses, and points scored for and against each team.

Usage

```
league_standings(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of team standings.

See Also

```
Other league functions: draft_recap(), league_members(), league_messages(), league_status(),
league_teams(), tidy_schedule(), transaction_counter()
```

Examples

```
league_standings(leagueId = "42654852")
```

league_status League status

Description

Current information about a league: the date activated, current week, starting week, final week, past seasons, teams joined, and waiver status.

Usage

```
league_status(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of league status by season.

See Also

Other league functions: draft_recap(), league_members(), league_messages(), league_standings(), league_teams(), tidy_schedule(), transaction_counter()

Examples

league_status(leagueId = "42654852")

league_teams

Fantasy league teams

Description

The teams in a league and their owners.

Usage

```
league_teams(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Details

If any team has multiple owners, the memberId column will be a list of unique owner memberID strings per team (see league_members()).

Value

A dataframe (or list) with league teams.

See Also

Other league functions: draft_recap(), league_members(), league_messages(), league_standings(), league_status(), tidy_schedule(), transaction_counter()

Examples

league_teams(leagueId = "42654852")

list_players

Description

Filter fantasy players by their position, availability, professional team, and/or injury status. Sort and limit the responses in the same way as is done in the ESPN Fantasy Football website.

Usage

```
list_players(
  leagueId = ffl_id(),
  sort = "ROST",
  position = NULL,
  status = "AVAILABLE",
  injured = NULL,
  proTeam = NULL,
  scoreType = c("STANDARD", "PPR"),
  limit = 50
)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
sort	The column from which to sort the data. Options match those on the ESPN website:
	• "PLAYER" = Alphabetical by player name
	 "PROJ" = Projection is ESPN's projected fantasy score for a player's up- coming game.
	 "SCORE" = Actual score for scoringPeriodId
	• "OPRK" = Opponent Rank shows how a player's upcoming NFL opponent performs against that player's position. Low numbers mean it may be a tough opponent; high numbers an easier opponent.
	• "START" = Start Percentage shows the number of fantasy leagues a player is started in divided by the number of leagues he is eligible in. This helps indicate how the public views a player.
	• "ROST" = Rostered Percentage shows the number of fantasy leagues in which a player is on a roster divided by the total number of fantasy leagues. This helps indicate how the public views a player.
	 "CHANGE" = Plus/Minus shows the change in %ROST over the last week. This will help show which players are hot and cold at a given moment.
	 "PRK" = Position Rank shows how a player stacks up against other players at his position. No. 1 is best.
	• "FPTS" = Total fantasy points scored thus far in the season.

	• "AVG" = Average fantasy points scored in each game started.
	• "LAST" = Last shows the player's fantasy score in his team's last game.
position	Abbreviation of player positions to filter, NULL for all:
	• "QB" = Quarterback
	• "RB" = Running Back
	• "WR" = Wide Receiver
	• "TE" = Tight End
	• "FLEX" = Running Backs, Wide Receivers and Tight Ends can be used in this position
	 "D/ST" = Defense and Special Teams
	• "K" = Kicker
status	Availability status of player, one or more from:
	• "ALL"
	• "AVAILABLE" (default)
	• "FREEAGENT"
	• "WAIVERS"
	• "ONTEAM"
injured	Whether to return only injured or healthy players. Use NULL (default) for all players, TRUE for injured players, and FALSE for healthy players.
proTeam	The abbreviation or ID of the professional team from which players should be returned. See pro_teams() for a list of all possible team abbreviations.
scoreType	The type of scoring used: "STANDARD" or "PPR."
limit	The limit of players to return. Use "" or NULL to return all. Defaults to 50, which is the default limit used by ESPN. Removing the limit can make the request take a long time.

Value

A data frame of players.

See Also

```
Other player functions: all_players(), player_info(), player_news(), player_outlook(),
recent_activity(), transaction_counter()
```

```
list_players("42654852", proTeam = "Mia", sort = "START", limit = 3)
```

live_scoring

Description

The current and projected score for each ongoing match.

Usage

```
live_scoring(leagueId = ffl_id(), yetToPlay = FALSE, bonusWin = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
yetToPlay	If TRUE, pro_schedule() and the "mRoster" view are called to determine how many starting players have yet to start playing.
bonusWin	If TRUE, a logical column bonusWin will be added containing TRUE values for teams who are projected to score in the top half of points this week. This is a way to project the "bonus win" optional setting added in 2022.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of scores by period.

See Also

Other scoring functions: tidy_scores()

Examples

```
live_scoring(leagueId = "42654852", yetToPlay = FALSE)
```

nfl_players 20	023 NFL Players

opponent_ranks NFL team performance against positions

Description

The average opposition team point differential by position.

Usage

```
opponent_ranks(leagueId = ffl_id())
```

Arguments

leagueId Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.

player_acquire

Value

A data frame of team performance against position.

Examples

opponent_ranks()

player_acquire Roster acquisition history

Description

The date and method of each player's acquisition onto a fantasy roster.

Usage

```
player_acquire(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of roster players with acquisition method and date.

Examples

player_acquire(leagueId = "42654852")

player_info

Description

Individual player information

Usage

```
player_info(playerId)
```

Arguments

playerId A single player ID number.

Value

A list or row of a single player's information.

See Also

```
Other player functions: all_players(), list_players(), player_news(), player_outlook(),
recent_activity(), transaction_counter()
```

Examples

player_info(playerId = 15847)

player_news Player news

Description

The free and premium ESPN stories on given players. A maximum of 50 stories can be returned at a time.

Usage

player_news(playerId, parseHTML = FALSE)

Arguments

playerId	A single player ID number.
parseHTML	Should HTML stories be parsed with xml2::read_html()?

player_outlook

Value

A data frame of news stories.

See Also

```
Other player functions: all_players(), list_players(), player_info(), player_outlook(),
recent_activity(), transaction_counter()
```

Examples

player_news(playerId = "15847")

player_outlook Player outlooks

Description

All available weekly ESPN outlook writeups for NFL players.

Usage

```
player_outlook(leagueId = ffl_id(), limit = 50)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
limit	The limit of players to return. Use "" or NULL to return all. Defaults to 50, which is the default limit used by ESPN. Removing the limit can make the request take a long time.

Value

A data frame of player outlooks by scoring period.

See Also

Other player functions: all_players(), list_players(), player_info(), player_news(), recent_activity(), transaction_counter()

Examples

player_outlook()

pro_events

Description

Data on the status of NFL games, including scores and odds, kickoff time, and broadcast information.

Usage

pro_events()

Value

A data frame of NFL events.

See Also

Other professional football functions: pro_schedule()

Examples

pro_events()

|--|

Description

The opponents each team faces every week in a regular season.

Usage

```
pro_schedule(seasonId = ffl_year())
```

Arguments

seasonId Season schedule (2004-present), defaults to ffl_year().

Value

Data frame of team opponents by week.

See Also

Other professional football functions: pro_events()

pro_scores

Examples

pro_schedule(seasonId = ffl_year(-2))

pro_scores

Professional scores

Description

The tidy data frame of scores by team.

Usage

pro_scores()

Value

A data frame of NFL scores.

Examples

pro_scores()

recent_activity Roster moves

Description

The individual proposed and executed transactions, trades, and waiver moves.

Usage

```
recent_activity(
  leagueId = ffl_id(),
  leagueHistory = FALSE,
  scoringPeriodId = NULL,
  ...
)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.	
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.	
scoringPeriodId		
	Integer week of NFL season. By default, NULL will use the current week (see ffl_week()). Scoring periods are always one week in length, whereas matchups might be longer.	
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.	

Details

As of November 2021, activity data related to trades coming from the API is flawed. The *items* list column containing the players involved in a trade will only contain data for *rejected* trades (with an executionType of "CANCEL"). For accepted and upheld trades, that *items* element is NULL or an empty list. This flaw comes from the API itself, not processing done by this package.

Value

A data frame of transactions and roster moves.

See Also

Other player functions: all_players(), list_players(), player_info(), player_news(), player_outlook(), transaction_counter()

Examples

```
recent_activity(leagueId = "42654852", scoringPeriodId = 2)
```

roster_score Sum of starting scores in a roster

Description

For a given roster tibble, sum the starting scores.

Usage

```
roster_score(roster, useScore = c("actualScore", "projectedScore"))
```

Arguments

roster	A roster data frame from team_roster().
useScore	One of "projectedScore" or "actualScore" (default).

roster_settings

Value

A starting score as double.

See Also

Other roster functions: best_roster(), start_roster(), team_roster()

Examples

```
roster_score(team_roster(leagueId = "42654852")[[1]])
```

roster_settings League roster settings

Description

The number of players and positions on a fantasy football roster.

Usage

```
roster_settings(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of league roster settings by season.

See Also

Other league settings functions: acquisition_settings(), draft_settings(), finance_settings(), league_info(), league_name(), league_size(), schedule_settings(), scoring_settings(), trade_settings()

Examples

roster_settings(leagueId = "42654852")

schedule_settings League schedule settings

Description

The length of a fantasy season and the match periods for each week.

Usage

```
schedule_settings(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of league schedule settings by season.

See Also

```
Other league settings functions: acquisition_settings(), draft_settings(), finance_settings(),
league_info(), league_name(), league_size(), roster_settings(), scoring_settings(),
trade_settings()
```

Examples

schedule_settings(leagueId = "42654852")

scoring_settings League scoring settings

Description

The scoring system used and points awarded for various actions.

Usage

```
scoring_settings(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

start_roster

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of league scoring settings by season.

See Also

```
Other league settings functions: acquisition_settings(), draft_settings(), finance_settings(),
league_info(), league_name(), league_size(), roster_settings(), schedule_settings(),
trade_settings()
```

Examples

scoring_settings(leagueId = "42654852")

start_roster	Starting roster	
--------------	-----------------	--

Description

The starting 9 man roster using standard roster slots. In the future this function may be adapted to take roster slots from roster_settings().

Usage

```
start_roster(roster)
```

Arguments

roster A roster data frame from team_roster().

Value

A data frame of starters on a roster.

See Also

Other roster functions: best_roster(), roster_score(), team_roster()

```
start_roster(team_roster(leagueId = "42654852")[[1]])
```

stat_corrections Stat corrections

Description

Weekly retroactive stat corrections by player.

Usage

stat_corrections(date = Sys.Date(), limit = 100)

Arguments

date	A date in the scoring week to return. Defaults to system date.
limit	The limit of corrections to return. Use "" or NULL to return all. Defaults to 100, which is the default limit used by ESPN. Removing the limit can make the
	request take a long time.

Value

A data frame of stat corrections.

team_abbrev Convert team ID to abbreviation

Description

Convert team ID to abbreviation

Usage

```
team_abbrev(teamId, teams = league_teams(leagueId = ffl_id()))
```

Arguments

teamId	A integer vector of team numbers to convert.
teams	A table of teams, like that from league_teams().

Value

A factor vector of team abbreviations.

```
team_abbrev(teamId = 2, teams = league_teams(leagueId = "42654852"))
```

team_roster

Description

The roster of all teams in a league.

Usage

```
team_roster(
  leagueId = ffl_id(),
  leagueHistory = FALSE,
  scoringPeriodId = NULL,
  ...
)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.	
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.	
scoringPeriodId		
	Integer week of NFL season. By default, NULL will use the current week (see ffl_week()). Scoring periods are always one week in length, whereas matchups might be longer.	
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.	

Value

A dataframe (or list) with league teams.

See Also

Other roster functions: best_roster(), roster_score(), start_roster()

```
team_roster(leagueId = "42654852", scoringPeriodId = 1)
```

tidy_schedule

Description

The opponents each team faces every week in a fantasy regular season. Returned in a tidy format where each row is a single team with an indication of home-away status. There are two rows per matchup, one for each team.

Usage

```
tidy_schedule(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

tidy_matchups(...)

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame(s) of match opponents.

See Also

Other league functions: draft_recap(), league_members(), league_messages(), league_standings(), league_status(), league_teams(), transaction_counter()

Examples

tidy_schedule(leagueId = "42654852")

tidy_scores

Description

The score of each team in a matchup or scoring period and the match outcome.

Usage

tidy_scores(leagueId = ffl_id(), leagueHistory = FALSE, useMatchup = TRUE, ...)

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
useMatchup	logical; Whether scoring should be summarized by matchupPeriodId (default) or scoringPeriodId. The later always relates to a single week of the NFL season, while fantasy matchups might span several scoring periods, especially in the playoffs.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Details

expectedWins are calculated by comparing a team score against all *other* scores for a given matchup period. This statistic expresses how a team would fair if the schedule was random The highest scoring team is thus expected to earn 1 win and the lowest scoring team would expect to win 0 matchups.

Value

A tidy data frame of scores by team and matchup/scoring period.

See Also

Other scoring functions: live_scoring()

```
tidy_scores(leagueId = "42654852", useMatchup = FALSE)
```

trade_settings League trade settings

Description

The time each trade can stand, votes needed to veto, and season deadline.

Usage

```
trade_settings(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of league trade settings by season.

See Also

```
Other league settings functions: acquisition_settings(), draft_settings(), finance_settings(),
league_info(), league_name(), league_size(), roster_settings(), schedule_settings(),
scoring_settings()
```

Examples

trade_settings(leagueId = "42654852")

transaction_counter League transactions

Description

Summary of transactions and roster changes made during a season by team.

Usage

```
transaction_counter(leagueId = ffl_id(), leagueHistory = FALSE, ...)
```

budget_summary(leagueId = ffl_id(), leagueHistory = FALSE, ...)

Arguments

leagueId	Numeric league ID or ESPN fantasy page URL. Defaults to getOption("fflr.leagueId"). Function fails if no ID is found.
leagueHistory	logical; Should the leagueHistory version of the API be called? If TRUE, a list of results is returned, with one element for each historical year of the league.
	Additional queries passed to httr::GET(). Arguments are converted to a named list and passed to query alongside view.

Value

A data frame of transaction counts by team.

See Also

```
Other league functions: draft_recap(), league_members(), league_messages(), league_standings(),
league_status(), league_teams(), tidy_schedule()
```

Other player functions: all_players(), list_players(), player_info(), player_news(), player_outlook(),
recent_activity()

Examples

transaction_counter(leagueId = "42654852")
